I'm starting the 7-Day DevOps challenge!

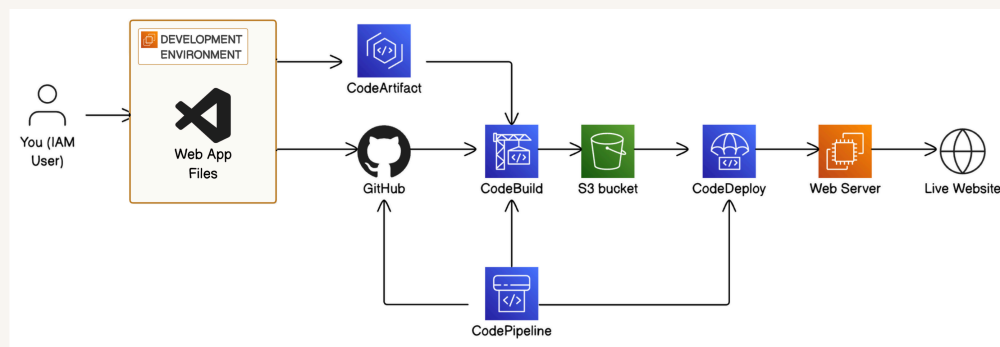

Muhammad Sadique

<https://www.linkedin.com/in/muhammad-sadique->

I'm building a CI/CD pipeline in 7 days

In this DevOps challenge, I'm learning about CI/CD pipeline concepts. By the end of the 7 days, I will have a functioning CI/CD pipeline.

Hold me accountable!

I will set aside 5-6 hours every day for a week to work on this challenge. I will keep myself accountable. My reward for completing this DevOps challenge will be the understanding of core ideas that underpins CI/CD pipeline.

What is DevOps?

DevOps is all about getting teams to build and deploy code faster without sacrificing reliability. It is a set of practices that combines development (writing code) and operations (deploying and maintaining code) to shorten development cycles and deliver reliable software. DevOps engineers implement DevOps practices in their organization. They build automated pipelines, containerize applications and turn cloud infrastructure into code.

What is CI/CD?

CI/CD stands for Continuous Integration/ Continuous Development. This process helps teams shorten Development life cycle by deploying small and frequent code changes after series of automated tests are being applied to the code using different tools.

Excited to share my progress - do this challenge with me!
